

Image solutions at your fingertips

RAI UMRAOPATI RAY

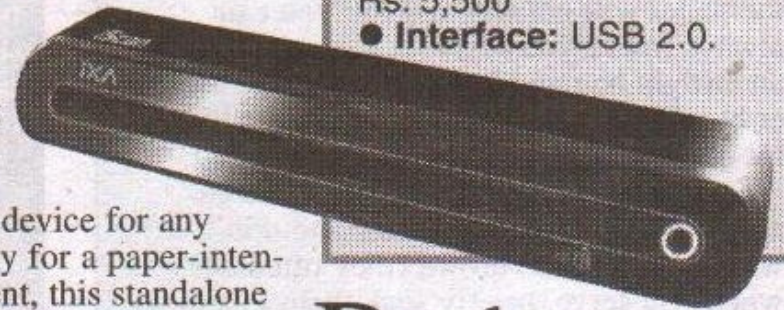

THE ASIAN AGE

Anyone who needs a portable business card scanner that is handy, efficient, easy to use and surprisingly fast, Kobians' new iScan IXA80S scanner may offer the solution. With a high glossy finish and sleek design, iScan IXA80S claims to be capable of scanning 600 cards per hour. Though, we have not tested this fact, the speed is up to the mark and this will help users/organisations in faster processing, fewer data errors and increased productivity. Offering quality scans at up to 600

dpi, the device supports global compatibility multiple languages and full colour duplex scanning of any media up to the thickness of a credit card. From scanning your documents to PDF, Word, Excel, Excel and text file, the scanner is fully equipped and is powered by USB bus power without an AC adapter. However, you need to clean the lens at appropriate durations to enjoy quality scanning. Though, this is an ideal device for any business needs especially for a paper-intensive business environment, this standalone scanner could be a bit of an expensive proposition.
